

After using the rodfender i found it to be very useful, it protects your rod from getting scratched as it also has a line slot to protect your line allowing the line to move freely on fish bites,weedy sessions and strong tides. The rod fender has a sponge rectangle grip on the bottom for anti slide and grips very well on almost anything, so no more trying to balance the rod on a rock or railing or even the boat and no more using a cloth as i think we've all tried that one and no how annoying it can be having to keep positioning the rod n cloth and getting caught up when tightening the line, thats why i believe rodfender is a great problem solver in situations like this and is a must for every tackle box. 🏆👍👍👍👍👍
